EDUCATION

Imperial College London — MSc Computing, Distinction Oct 2023 – Sep 2024

- Individual project (79%): built a security-focused smart-contract analysis plugin (TypeScript/React) that improved AI-generated contract security by 67% versus the baseline co-pilot at under USD 0.003 per run.
- Engineered a full-stack note-taking microservices application with RESTful APIs, containerised with Docker and deployed on Microsoft Azure with GitHub Actions CI/CD, in a team of five.
- Built a neural-network library from scratch and trained a PyTorch regression model on housing prices, graded 97% for technical implementation and reporting.
- Modules: Software Engineering Design, Software Systems Engineering, Principles and Practice of Programming, Algorithms, Databases, Computer Systems, Introduction to Machine Learning, Logic and Mathematics.

Imperial College London — BSc Medical Biosciences with Management, First Class Honours Oct 2019 – Jun 2023

- **Dean's List - Management Year:** awarded to top 10% of cohort.
- **Winner, ICBS Best Group Project:** led the quantitative analysis of a year-long study on drivers of FinTech start-up success in the UK and France, running multivariate regressions, decision trees and feature-importance models in Python and R on PitchBook data, and translating results into a data-driven report for a non-technical audience.
- Relevant Modules: Finance and Financial Management 86%, Accounting 84%, Business Economics 79%, Biomedicine Data Science 82%, Research Methods and Practice 73%.

South Island School, Hong Kong — International Baccalaureate, 40/45 Aug 2017 – Jun 2019

- Higher Level: Mathematics 7, Biology 7, Chemistry 6.

PROFESSIONAL EXPERIENCE

SleekFlow, Hong Kong — Software Engineer Intern (B2B SaaS, messaging and CRM, 7000+ customers) Apr 2026 – Present

- Delivered 85 tickets across 12 two-week Scrum sprints on a React/Typescript and C#/.NET stack.
- Shipped 45+ tickets on team inbox, the platform's core product, including in-chat search, saved replies v1 to v2 migration, and message list filters.
- Liaised with customer support and senior engineers on 35+ production defects, shipped 5 as mid-sprint hot-fixes; traced root causes using GCP and Azure logs, inbound webhook payloads, database queries and browser DevTools, and wrote plain-language updates for CS.
- Served as sprint master and on-call technical support for two sprints, leading daily stand-ups, team meetings, and retrospectives.
- Built a silent webhook-replay backfill that recovered inbound WhatsApp messages lost to an identity-index failure, preserving timestamps without firing automations or notifications.

Anlyvis, Hong Kong — Data Engineer Intern (part-time) Jul 2025 – Sep 2025

- Raised computer-vision dataset quality by redesigning annotation protocols and curating training subsets; the model then met the client's accuracy requirement of over 90% after earlier iterations had fallen short.
- Automated data-ingestion pipelines in Python, cutting raw-media processing time, and wrote test suites for previously untested internal tools, reaching 100% coverage and resolving several long-standing defects.

The University of Hong Kong — Bioinformatics Summer Intern Jul 2022 – Sep 2022

- Engineered a convolutional neural network in PyTorch to model RNA transcription efficiency from genomic sequences, covering data preprocessing, architecture design and performance evaluation.

SKILLS

Languages: Python, C++, Java, Typescript, C#, HTML, SQL, R.
Frontend: React, Material UI and design tokens, Vite, i18n.
Backend: .NET, REST APIs, webhooks, Entity Framework Core, SignalR.
Architecture: microservices, monolithic applications, event-driven messaging, API gateways.
Cloud and Data: Microsoft Azure (Service Bus, Event Hub, Cosmos DB), SQL Server, PostgreSQL, Redis, Docker.
Practices and Tools: Git, CI/CD, TDD, Agile Development, Scrum, Posthog, Sentry, Grafana, Figma, Pytorch.
AI Tooling: Claude Code (custom subagents, skills, scheduled automations), Cursor.
Spoken: English (Native), Cantonese (Fluent), Mandarin (Fluent)

LEADERSHIP AND ACTIVITIES

- **IC Hack 2024, Newcomers Runner-up:** built and presented a Spotify playlist recommendation web app based on facial expression detected mood and personal music preferences in a team of five within 24 hours.
- **Management Society Mentor (2023 – 2024):** provided structured guidance to new students, tailoring advice to individual needs.
- **Algorithmic Trading Society, Imperial (2023):** explored quantitative trading foundations and competed in Algothon 2023.
